EDUCATION

School of Engineering, Cochin University of Science and Technology (CUSAT) <i>Bachelor of Technology (B.Tech) in Computer Science and Engineering, CGPA: 8.5/10</i>	Cochin, Kerala Oct 2022 – Apr 2026
---	---------------------------------------

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, SQL
- **Web & Backend:** Spring Boot, Node.js, FastAPI, REST APIs, JWT, Microservices
- **Frontend & Mobile:** React, Next.js, Tailwind CSS, React Native
- **Databases & DevOps:** PostgreSQL, MongoDB, Redis, Docker, AWS (EC2, S3, RDS), CI/CD
- **ML & Tools:** PyTorch, CNNs, Transformers, Firebase

EXPERIENCE

Ylogx Pvt. Ltd. <i>Software Engineer Intern</i>	Feb 2025 – Dec 2025
• Modularized admin dashboards in React and Node.js enabling role approvals, access management, and workflow control of about 50 employees, similar to AWS-style permission handling. • Built Express.js middleware for JWT authentication and Role-Based Access Control (RBAC), automating permission checks that were previously handled manually via spreadsheets. • Constructed a CI/CD pipeline using GitHub Actions to automate multi-stage deployments to AWS EC2, S3, and RDS, incorporating SQL migration scripts for database consistency. • Reduced average page load time by 25% by using React lazy for code-splitting and optimizing SQL join queries to reduce API response sizes.	
IIT Jammu <i>Application Developer Intern</i>	May 2023 – Sep 2024
• Developed a campus chatbot using React Native and FastAPI that resolved 1,500+ queries/month by implementing a conditional routing engine for student FAQ data. • Architected a PostgreSQL schema with indexing on high-frequency columns and integrated AsyncStorage for local caching to maintain app functionality during network drops. • Created a Web Admin Portal that allows staff to modify chatbot responses and user roles via RESTful APIs, eliminating direct manual edits to the database.	

PROJECTS

Single Image Super-Resolution (Ongoing)	Jan 2026 – Present
• Designing a hybrid CNN and Transformer model in PyTorch for single-image super-resolution, aiming to enhance image clarity and PSNR metrics.	
E-Commerce Backend Platform	Nov 2025 - Dec 2025
• Defined a microservice-based e-commerce system with authentication, product, cart, and order services, enabling modular scalability and independent deployments. • Optimized performance using Caching and containerized services deployed on AWS:EC2 and RDS, cutting API latency about 70% under load and improving system reliability.	
VertEase – Vertigo Management App	Jan 2025 – Mar 2025
• Built a mobile health tracker using React Native for symptom logging and FastAPI for data persistence. • Containerized the FastAPI backend and React frontend using Docker for deployment on AWS EC2, while integrating Firebase for real-time data synchronization.	

CERTIFICATIONS

- Data Science, Machine Learning & NLP Bootcamp — Udemy (Krish Naik), 2025
- SQL Programming Essentials — Udemy, 2024
